Lowell Reeve
Co-Founder & COO

Brett Hartley
Chief of Staff

Stephen Mulherin
Lead Developer & CTO

## Cut The Red Tape

Blueblade automates compliance review for any permitting, licensing, or inspection process; upload submittal materials and receive a compliance report, cited to every applicable clause in your regulations. It's that easy.

## No More Box-Checking

Hosting your regulations in Blueblade lets your staff spend less time (and money) on document review and more on achieving strategic targets without compromising on health & safety.

## Optimized (not Outsourced) Decision-Making

Blueblade knows you don't want an AI making your permitting decisions for you; instead, Blueblade generates clear, cited compliance reports with every data point you need to make the best decision possible.

## Let Blueblade Do The Dirty Work

All the info that Blueblade needs is encoded in your regulatory texts; we won't take up any of your scarce staff time until your logic is fully encoded and ready for testing.

## Many Departments, One Blueblade

Make redundant, conflicting reviews a thing of the past; Blueblade automatically merges parallel review processes, ensuring efficiency and consistency.

## No Overhauls Needed

Don't worry about getting rid of your existing software; Blueblade can provide plug-in review automation for any legacy system or our delivery partners can help you build the perfect permitting management solution around Blueblade's foundation.

## Transparent Efficiency

Once you are comfortable with Blueblade's alignment with your regulations, its logic engine can be exposed to applicants with a single click to start improving submittal compliance before permitting even begins.
